

# About VS Code, project use

## What is needed?

1. VS Code [Click here](#)
2. Git [Click here](#)

## Git installation requirements

Make sure, that you have chosen VS Code, as git editor (switch from Vim).

Make sure, that **Git Bash** is chosen to install.

Remember about Path variable, see below.

## Environmental variables

**Important**, see if both, *git* and *vs code* are added to Environmental Variable, **Path**, during installation.

## How to check it?

Press Win+R , type `cmd` and hit Enter .

1. Then type `code` and Enter . If VS Code has popped up, it means it's fine.
2. Type `git` and Enter , if git help appears, then you're good too.

## Workspace

In your workspace, create folder `hands_on_code` , you'll gonna work there, during the presentation.

## Finally

Any issues, call me.
